SERVICE POLICY

Autochuck Safety Testing - to ensure patient safety, DS Dental Repair use calibrated force meters to check the amount of force required to remove a locked bur.

Acoustic Testing - if a component is defective, or has been installed incorrectly, our acoustic test will pick up any imperfection before the handpiece is returned to you.

Turbine Balancing - all turbines are balanced, reducing premature failure and noise pollution.

Concentricity Testing - each handpiece is tested to ensure it is running concentrically, ensuring optimum perform.
